SMART LOADING ZONES 101

Why Smart Loading Zones (SLZs)?

Commercial delivery is surging, causing more traffic, pollution, and safety risks. SLZs help to ease curb and road congestion for the benefit of businesses, residents, and fleets.

Where are SLZs located?

In high-congestion commercial districts in Pittsburgh, including Downtown, South Side, Oakland, and other neighborhoods.

How are SLZs enforced?

They are monitored by license plate readers and tickets are issued to vehicle owners by mail if a violation occurs. Violations include:

- unregistered use past 15min grace period
- using a SLZ for longer than the time limit
- double parking beside a SLZ.

How does CurbPass work?

CurbPass is an automated payment system where users sign up once, and then have access to all zones. Drivers and fleets can register their vehicle(s) by making an account that will be automatically billed based on use.

PROGRAM ACHIEVEMENTS

- Doubling the number of parks per zone, meaning more use and higher parking turnover, benefiting local businesses.
- Less double parking, leading to safer conditions by reducing dangerous merging and passing.
- Buy in from delivery fleets that have requested additional locations for improved delivery access.

PRIORITIZING PRIVACY

100% surveillance-free

Smart Loading Zones use license plate readers that are private-by-design. They only collect data for payment processing.

EACH LICENSE PLATE READER CAPTURES:

- ☑ park duration
- ☑ license plate

Personally identifiable information, like faces and other physical features, are never collected, stored, transmitted, or shared for any purpose other than facilitating payments and citations.
